

## Kommetjie EMFSA

FOR THE SAFER USE OF TECHNOLOGY

### Slide presentation 30- 45mins

Presentation Subjects. [Note! all designed for general public]

1. Brief introduction to radiation types and appropriate measuring instruments
2. Historical and current environmental pollutants
3. Cycles in nature
4. Natural and Unnatural Radiation.
5. Origins of analogue and pulsed modulation
6. Radiation standards East and West
7. World Health Organisation and its advisors, thermal based standards
8. Alternative biological based standards
9. New biological standards based on accumulated dose
10. Why are EMF surveys necessary - examples from case studies
11. Can non-ionizing radiation cause health effects?
12. 5G. What is it & international fight for communications supremacy
13. The 5G battle lines in S.A.
14. Small cell deployment, laws. national and local
15. Options for objectors.
16. Self Help Recommendations

Question and answering session – 15 to 20 mins afterwards

Person asking questions must state name and occupation (in case industry is present).

## **Background**

EMFSA is run by Dave and Wilma Miles.

Listen: <https://jameslech.co.za/2018/07/04/ep-4-superdads-emfsa-with-dave-and-wilma-miles-surveying-your-home-and-environment/>

Dave has 40 years' experience in electrical installation and ionizing radiation systems and during the last 7 has incorporated non ionizing radiation into his portfolio.

Wilma has a microbiology background and is an avid EMF researcher ensuring that the website is kept up to date with the latest credible EMF research.

EMFSA is very blessed to have at our disposal the added input of our special advisor, Mr James Lech who is doing ground-breaking research on the topic of non native EMFs.

Mr Lech has just completed a countrywide series of lectures to GPs (for Continuing Professional Development points) on the topic of nnEMFs.

### **Services we provide:**

#### **Education above all**

It is for this reason that we put together as a service for the public our first time user friendly EMF Assessment kit. This kit is available for hire countrywide.

We also offer personal surveys of private homes, offices, schools, and factories.

After the results of an EMF survey has been interpreted by us we provide a report based on independent biological guidelines and suggestions (including products) as to remediate any problems, should there be any.

Our heart is with the future – our children – we supply measuring equipment at minimal cost to learners who do school EMF projects.

Education – we have twice been attended and exhibited at National Health Environmental Congresses (upon invitation).

EMFSA has begun the training of Environmental Health Professionals on the practical application of measuring and reporting on the different types of radiation that currently exist.

Assisting communities with cell tower objections.

Assisting those with EHS (Electrohypersensitivity)/Electromagnetic Field Intolerance Syndrome.

**NOTE: EMFSA does not sell or promote the following:**

“health chips”, “EMF radiation protection chips”, “mobile phone shields”, etc., that supposedly reduce the adverse health effects of mobile phones by “reducing radiation levels” or “reducing the gradients of the magnetic fields” or “smoothing the peaks”, or “alter the radiation into a form that does not produce adverse health effects”, or “transform and neutralize the harmful effects of EMFs by radiating a protective field when placed directly on devices”, etc.

That includes orgonite, shungite, crystals, pendants.....

We will donate two sets of air tube headsets without metal to use with cell phones, plus a set of plastic blue blocking glasses. We suggest you sell raffle tickets - most people can afford R50.

Social Media Links: (via a hardwired computer to reduce EMF exposure, f.lux installed to reduce blue light exposure)
